

DevOps/Continuous Integration Engineer

InfoTycoon is the leader in multifamily inspections and asset management solutions. Designed for the full asset management lifecycle, our powerful web, and mobile platform is now used by nearly 40 percent of the NMHC Top 50 including 3 of the 5 largest property managers. InfoTycoon is the only software company to receive industry awards from both NMHC (National Multifamily Housing Council) and MFE (Multifamily Executive).

We are in the process of designing and developing our next generation web and mobile SaaS platform using the latest technologies. In this position, you will be responsible for working closely with our development team to create an automated continuous integration (CI) and continuous delivery (CD) system. This role will be responsible for defining and implementing the build, deployment and monitoring standards for the organization. We are starting fresh with an “automate everything” approach and need someone with the technical aptitude and experience to help us take our build, test, deploy and operation processes to the next level.

The ideal candidate is someone who is passionate about building great technology solutions using the best frameworks, tools, patterns, and practices. We are looking for someone who enjoys taking the initiative to examine all aspects of the technology stack, who can help drive and shape the new platform and most importantly cares about the quality of our platform and their deliverables.

Skills and Requirements

Required Skills:

- Experience deploying and monitoring web applications in AWS.
- Experience deploying and monitoring web applications in Azure.
- Experience with Docker and orchestration frameworks like Docker Swarm or Kubernetes
- Experience with Linux/Unix administration.
